Load Charts for Cranes, Aerial Lifts, and Telehandlers

At one radius the value of "Lifting height*Capacity" varies with different main boom lengths. At each radius the maximum value of "Lifting height*Capacity" is chosen. For every main boom length a table is made, for the LTM1100-5.2: Main boom length 19.0 m Main boom length 30.1 m Main boom length 52.0 m Radius Lifting height Capacity Lift.

How to determine the Crane Capacity Index - ESTA

These include an NCCCO Guide to the new rule, which contains the full regulatory text, answers to numerous frequently asked questions (FAQs), a flow chart to help determine when certified crane operators are required, applicable letters of interpretation from OSHA, and NCCCO's analysis of the qualification requirements for crane operators ...

NCCCO - OSHA's Crane Rule Resource Center

A crane is an item of plant intended for raising or lowering a load and moving it horizontally including the supporting structure of the crane and its foundations. There are a range of 'fixed' (tower, bridge, gantry, portal boom, vessel-mounted) and 'mobile' (slewing, non-slewing, vehicle loading) cranes.

General Guide for Cranes - safeworkaustralia.gov.au

The standard crane capacity calculation formula is given by $(r)(hC)/100$, where r is the radius (distance along the ground to the load) and hC is lifting height times capacity. Capacity, in turn, is particular to each boom arm length and angle chosen, and must be looked up in a table such as the one in the Resources.

How to Calculate Lifting Capacity | Sciencing

CPA Crane tire waives the right of recovery under Clause 13 of the CPA Model Conditions of Hire "Hirer's Responsibility for Loss and Damage" at 16.5% of invoice value: • Accidental damage to crane on hire to full replacement value. • Loss of hire charges as a result of loss or damage to the crane.
